

Diploma average calculation Curriculum 9002AK_N

In determining the diploma average, every one of the required examinations and comprehensive examinations, the thesis, and each part of the final (State Board) examination equally influence the final grade.

Calculation method for the diploma average: $XD = \frac{Xn + D + I + Sz + Gy}{n + 4}$

Where XD = diploma average,

Xn = the sum of the grades given to examinations and comprehensive examinations,

D = the grade awarded to the thesis,

I = the grade awarded to the written part (test) of the examination,

Sz = the grade awarded to the oral part of the patient examination,

Gy = the grade awarded to the practical part of the patient examination,

n = the number of examinations and comprehensive examinations prescribed.

The evaluation of the diploma:

Summa cum laude	4.51 – 5.00
Cum laude	3.51 – 4.50
Rite	2.00 – 3.50
